Your PROPHET Profile
James Parsons

August 2019

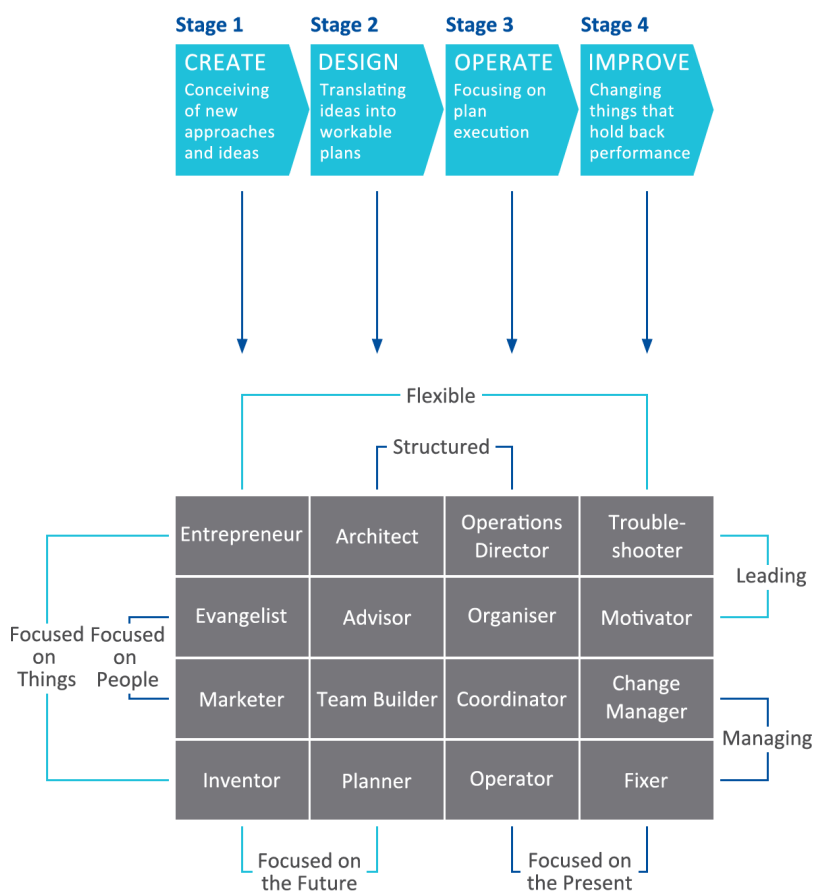

Introduction to PROPHET

PROPHET is a business-focused profiling tool that helps people understand how they and others work in a commercial context and how they can best work together to bring value to their organisation.

PROPHET helps individuals understand their style of working and its implications for working with others. It also helps teams understand how to get the best from everyone and form the right relationships to enhance performance significantly. Finally, it helps organisations understand the potential of their people to execute business strategy.

The PROPHET Schema

The Business Stages

PROPHET examines the extent to which people prefer Creative activities, or to Design, Operate or Improve. The PROPHET schema follows the four stages: coming up with new ideas, turning them into workable plans, delivering on these plans and improving and fixing any mistakes. Once these stages have been completed effectively, it is time for the next important idea, and the cycle starts again.

PROPHET Role Alignment

Each of these four stages is mapped against the PROPHET schema, made up of 16 different business Roles that a successful business is likely to need. PROPHET helps people understand when it is time to leverage their own preferences and when it is time to leverage preferences of others.

PROPHET's underlying principles

PROPHET is based on the principle that people are likely to be most successful and contribute the most value to a business if:

- What they are doing really motivates them, so that they put more energy, enthusiasm and commitment into what they do.
- They are in a role that is creating value for their organisation, even if it is in a relatively small way in a large business.
- The work they are doing suits the way their brain works. People who tend to be logical and systematic are likely to be more successful in roles that call for a logical and systematic approach, whilst people who are inventive are apt to be more successful in roles that call for creativity. NB. PROPHET is not designed to be used as a selection tool for a job.

How your report is constructed

Motivations

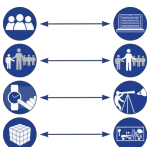

What stimulates desire and energy in people to be continually interested and committed to a job or role or to make an effort to attain a goal. PROPHET looks at four Motivations: Driving, Influencing, Team and Order.

Decision-making Styles

How people react to situations and choices, what their approach is to selecting a course of action among alternative possibilities. PROPHET looks at four Decision-making Styles: Inspired, Experimental, Systematic and Analytical.

Inclinations

PROPHET also looks at the extent to which people are inclined to focus on different competing business activities, all of which are important for success. People may be inclined towards: being focused on People or Things, Managing or Leading, being focused on the Present or the Future, or being Structured or Flexible.

Your PROPHET Heat Map

CREATE	DESIGN	OPERATE	IMPROVE
Entrepreneur	Architect	Operations Specialist	Troubleshooter
Evangelist	Analyst	Organiser	Monitor
Marketer	Team Builder	Coordinator	Change Manager
Inspector	Planner	Operator	Leader

Finally, PROPHET examines relative preferences across the 16 business Roles that span the four business stages: Create, Design, Operate and Improve. This helps identify who is likely to be an ideal business partner, with complementary Motivations and Decision-making Styles.

The PROPHET schema is more than two dimensional. The first column is connected to the last column, and the top row is connected to the bottom row. In fact, it is structured as a torus or donut shape. For example, the Troubleshooter Role is only one step away from the Entrepreneur, sharing three similar Inclinations.

Should you have any questions, please contact the accredited user who you are working with: prophet@prophetprofiling.com

Introduction to your Motivations

Highly motivated people feel compelled to achieve things. When people feel no impetus to act, they could be described as unmotivated, whereas people who are energised toward an end are considered motivated. Businesses are concerned with motivation, since it is inextricably linked to performance. Motivation can be expressed as a preference for a task, a need, or a focus on an objective. Appreciating your motivations and how they relate to those of others, can help people work better together.

Theories of motivation generally agree that people vary not only in level of motivation (i.e., how much motivation), but also in the orientation of that motivation (i.e., what type of motivation). As an example, a businessperson might be highly motivated to work long hours out of ambition to be the best and rise to the top. Alternately, he or she might want to develop a depth of expertise in a profession in order to be recognised as a specialist. The amount of motivation does not necessarily vary, but the nature and focus of the motivation does. It is particularly important for business professionals to understand the orientation of their staff's motivation, their underlying attitudes and personal goals, since that is what brings about action.

PROPHET looks at levels of business motivation derived from each of four orientations: Driving, Influencing, Team and Order.

Definitions of the four Motivations

Driving

Goal-oriented, direct and assertive, motivated by winning and success, these individuals are likely to push boundaries and other people to achieve their aims.

On a good day: They are likely to pursue an outcome relentlessly.

On a bad day: They might ignore others' feelings in forging towards their goals.

Influencing

Convincing and persuasive, motivated by leading others towards an outcome, these individuals could potentially push people beyond what feels comfortable.

On a good day: They often generate energy and motivation in others.

On a bad day: They may seem pushy and possibly difficult to say "no" to.

Order

Accurate and detail-focused, motivated by quality of work, these individuals tend to be careful, organised and rigorous.

On a good day: They are apt to bring quality and precision to business activities.

On a bad day: They might expect unjustifiably high standards of themselves and others, possibly being picky and pedantic.

Team

Cooperative, sympathetic and caring of others and motivated by teamwork, these individuals tend to be calm, patient, stable and supportive.

On a good day: They are likely to watch out for others and team-up very effectively.

On a bad day: They may be reluctant to challenge for fear of offending.

Your Motivations Charts

This element of your Profile describes the aspects of your working life that are likely to give you the greatest satisfaction. The charts below indicate the extent to which you might be motivated by each of the four PROPHET Motivations.

The text that follows provides an analysis of the strength and direction of your Motivations.

Generally people have one or two strong Motivations. In some cases, a person's most notable feature is having a very low preference for one of the four Motivations while being balanced across the other three.

Motivations Heat Map – your relative preferences

The Heat Map shows your personal relative preferences for each of the four PROPHET Motivations.

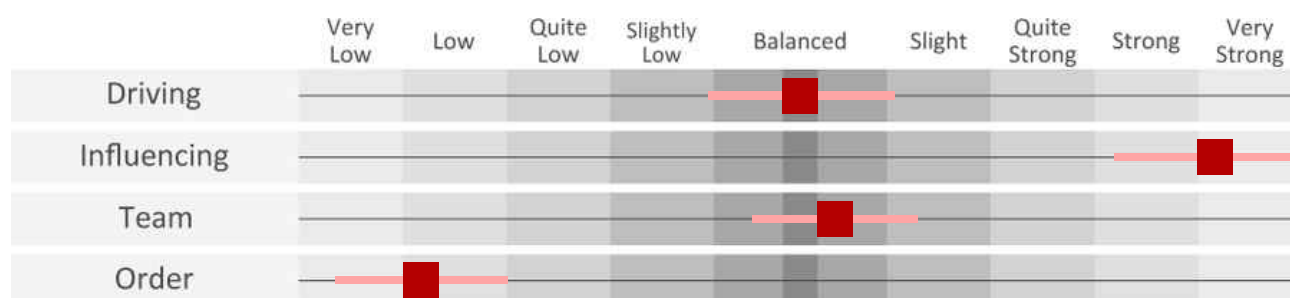

Key

Low Balanced Strong

Red represents your strongest preferences. Blue represents your lowest preferences and is also an indicator of who has the potential to complement you best.

Your Motivations Scores – your preferences benchmarked

How to interpret the chart: You are able to see how your preference compares to a 'typical' executive, taken from a large norm population of people in professional roles. The mid point on the chart shows the average score for a typical executive. The greyed area around the mid point illustrates the region which may be interpreted as a more balanced preference. A red box outside of the balanced area indicates a more exaggerated preference. Your personal preference is indicated by the red box – and the pink band around this shows where your score is likely to come out if you were to repeat the test, allowing for a margin of error that exists with all measurement. This band indicates 1 Standard error of measurement, indicating where you are likely to come out 67% of the time.

Your Motivations Profile

You have described yourself as being very much more strongly motivated than the average executive by influencing others.

People whose responses indicate this level of preference for Influencing others are very likely to be convincing and persuasive. Your responses indicate that you are likely to be motivated by leading others towards an outcome, potentially pushing people beyond what feels comfortable. On a good day you will be keen to rally and galvanise people, stimulating action. People like you will seek to win support and commitment to achieving an objective, getting the key decision-makers behind a plan. You are likely to try to shift others' perception of what is possible, stretching their views of what they feel capable of and thereby helping the business achieve its potential. You are likely to bring energy and enthusiasm to teams. You tend to be forthcoming in tackling obstacles to success, endeavouring to go about this in a way that makes people feel good about the change required. A possible blind spot is likely to be that you focus on getting people on side but that they feel they are caught up in your momentum, possibly being encouraged to do something that is far beyond their comfort zones and they can't always find a way of conveying how they really feel. You may find that some people withdraw from your enthusiasm. A desire to interact with others and operate in a sociable way may, at times, feel too close for comfort for certain people. Additionally, some people may like to reach their own views without being persuaded and resist influence.

Recommendation: Be clear and transparent about your objectives and your motivations so that others can understand your intentions. They, in turn, will feel better able to express their own true opinions. Resist the temptation to push people too much and more quickly than they would like, which could make some feel uncomfortable. Try to strike the right balance between engaging people and interacting frequently - alongside allowing those who prefer more personal space, the time to reflect and work alone.

In addition, you have described yourself as showing a lower preference than the average executive for prioritising working in an orderly way, focusing on detail and minutiae. Just because others may have a stronger preference for Order than you doesn't mean that quality isn't important to you. Be careful not to miss those occasions when you need to focus more carefully on important details. Agree with others the best way to oversee and manage decisions or projects you are involved in, in order that you conduct attentive and structured review of work.

Recommendation: Remind yourself why detail is critical, and prioritise when you need to devote all your attention to delivering the best possible result. Make sure that your working week always allows for some time dedicated to getting yourself organised.

Notes:

Introduction to your Decision-making Styles

Performance in business requires teams to adapt their approach to making decisions at different times. Success might be the result of following a precise set of guidelines, or brought about by the desire to try new things. Sometimes increased productivity comes from people taking fast decisions, accelerating planning and eliminating the irrelevant or less important details. On the other hand, the correct course of action might be the culmination of careful planning, assessment and concern about potential risks. Drawing on psychology of judgement and decision-making, PROPHET looks at four Decision-making Styles in business. Business leaders and line managers need to understand how people in business use judgement and make decisions. By understanding the processes at work within their teams they can resolve differences quickly, take better decisions by covering different angles and reduce biases that may be present within all team dynamics.

Definitions of the four Decision-making Styles

Inspired

Highly imaginative, these individuals often prefer to speculate and instigate change. They believe in their ideas and are not afraid to offer new and different ways of thinking about decisions.

On a good day: They often bring creativity, ingenuity and a vision of change.

On a bad day: They may find it difficult to focus on routine tasks and concrete plans.

Experimental

Highly responsive, these individuals tend to jump to action to bring about immediate improvement and change and often want a quick decision to resolve problems.

On a good day: They are apt to want to improve business issues fast and are adept at coping with change.

On a bad day: Their lack of future thinking and careful planning may mean they constantly need to put out fires.

Analytical

Highly rational, these individuals are mostly data-driven. When faced with a decision, they like to gather information, think through problems and analyse ideas to determine the best solution.

On a good day: They carefully consider the best approach to a new idea or problem.

On a bad day: They may miss opportunities through over-analysing situations rather than acting.

Systematic

Highly reliable, these individuals prefer structured and planned situations, seek clarity and definitive direction, and work in a step-by-step fashion to reach a decision.

On a good day: They can generally be depended on to adhere to a plan and pursue a high standard of execution.

On a bad day: They may not spend sufficient time looking at better options or a different future.

Your Decision-making Styles Charts

This element of your Profile describes the way you typically make decisions. The charts below indicate the extent to which your Decision-making Style is Inspired (very flexible and free-thinking), Experimental (making quick decisions to resolve problems), Systematic (following very structured and logical processes) or Analytical (carefully assessing different options). The text that follows describes the nature of your Decision-making Styles.

As with Motivations, people can have one or two strong Decision-making Styles. In some cases, a person's most notable feature is a very low preference for one of the four Decision-making Styles and a balance across the other three.

Decision-making Styles Heat Map – your relative preferences

The Heat Map shows your personal relative preferences for each of the four PROPHET Decision-making Styles.

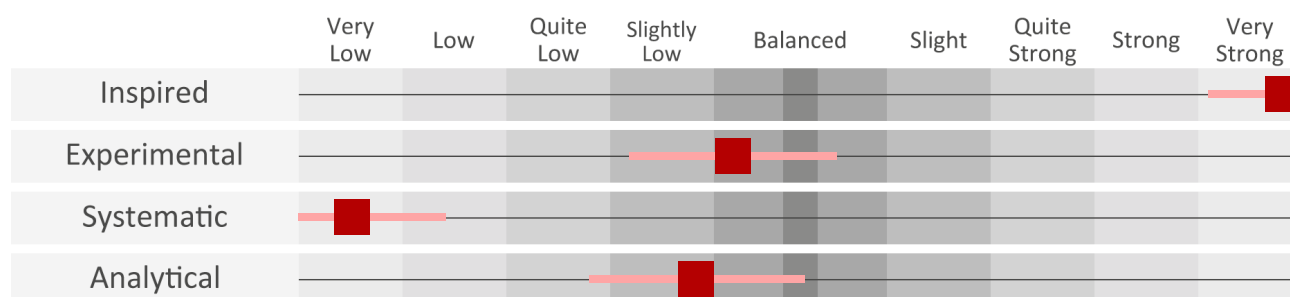

Key

Low Balanced Strong

Red represents your strongest preferences. Blue represents your lowest preferences and is also an indicator of who has the potential to complement you best.

Your Decision-making Styles Scores – your preferences benchmarked

How to interpret the chart: You are able to see how your preference compares to a 'typical' executive, taken from a large norm population of people in professional roles. The mid point on the chart shows the average score for a typical executive. The greyed area around the mid point illustrates the region which may be interpreted as a more balanced preference. A red box outside of the balanced area indicates a more exaggerated preference. Your personal preference is indicated by the red box – and the pink band around this shows where your score is likely to come out if you were to repeat the test, allowing for a margin of error that exists with all measurement. This band indicates 1 Standard error of measurement, indicating where you are likely to come out 67% of the time.

Your Decision-making Styles Profile

You have described yourself as having an extremely pronounced Decision-making Style: You are very much more likely to prefer taking an Inspired approach compared with the average executive.

People whose responses indicate this level of preference for an Inspired Style are very likely to be imaginative, speculative and think about how to instigate change. Typically, you will prefer to come up with new ideas and new and different thinking to contribute to decisions. You are very likely to thrive in situations in which there is a need for different perspectives and concepts such as at the early stages of ventures or when there is a fundamental change of direction required. You are likely to come up with innovative and fresh interpretations, unconstrained by what is in place or what has been done before. You may favour considering fundamental changes, not just incremental changes and typically be regarded as creative and original by your colleagues. Watch out for a possibility that you may move on to the next big idea too eagerly, preferring new horizons to feeling that there are constraints you must abide by. You may perhaps be less interested in the practicalities of whether or not an idea will work or how it will work once it is up and running. Be careful not to come up with too many ideas when it is preferable to stick to the decision.

Recommendation: Make sure you think carefully about when to focus on planning and execution, rather than keeping options open, coming up with different possibilities. Seek challenge of your ideas in a structured way, asking others sufficiently early on to offer their views on the pros and cons. Be careful not to become overly attached to a given option, resisting constructive challenge. Asking others for their opinions on new ideas will mean they are ultimately more likely to offer support as they will feel more engaged in the creative process.

In addition, you have described yourself as very much preferring not to work in a Systematic way. With this level of preference for a Systematic Style, you are likely to prefer to have the opportunity to shape what you are doing and freedom to use your judgement. You may be prone to getting irritated by the need to follow established processes even when they are important, potentially resulting in not complying with ways of working that others may deem to be crucial.

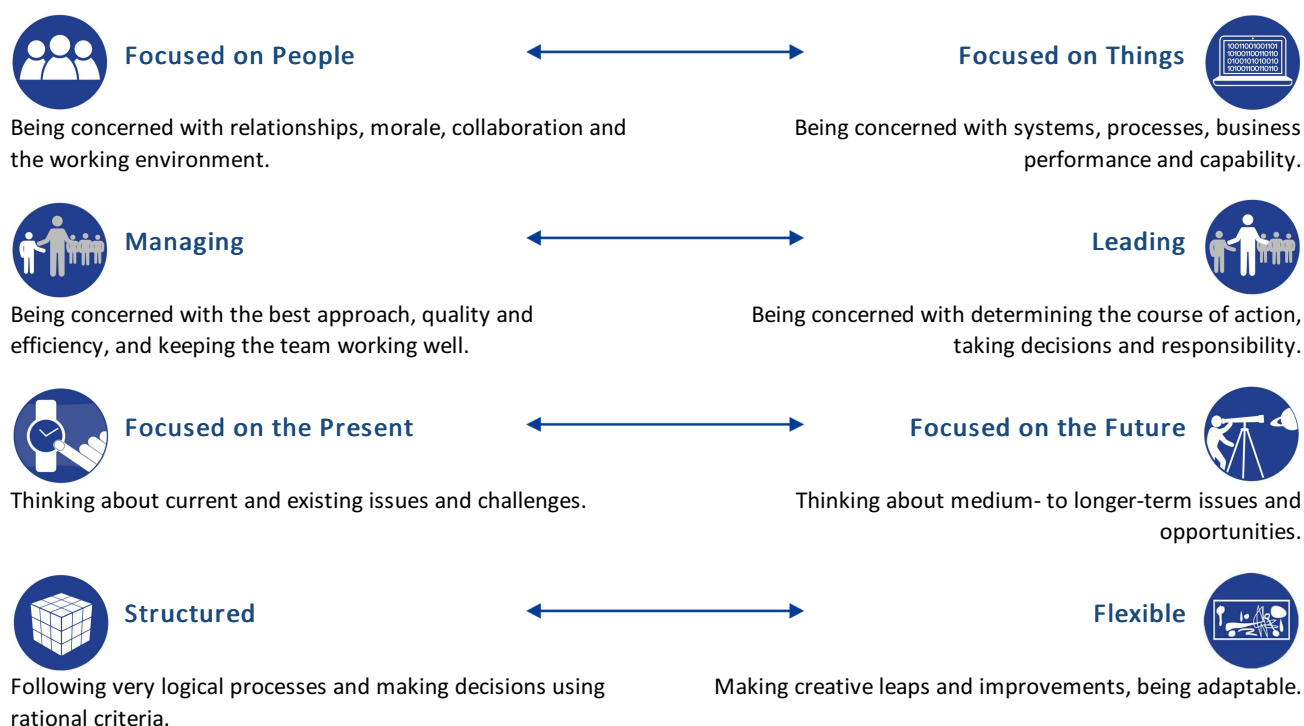

Recommendation: Make sure that you understand which procedures are important to the business for you to adhere to and when to act consistently and predictably. Balance up when it may be valuable to deviate from a proven method versus when it may actually be less efficient or result in a worse outcome to consider alternatives rather than sticking with what has been tried and tested.

Notes:

Introduction to Inclinations

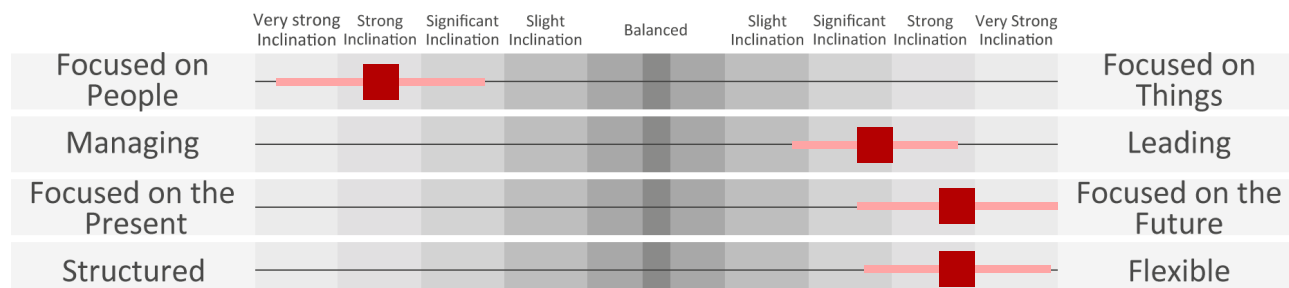

This element of your Profile presents a set of four Inclinations. Derived from your Motivation and Decision-making Style Profile, this tells you the extent to which you are focused on People or Things, and on Managing or Leading. It also tells you whether you might be more inclined towards being focused on the Present or Future, and the extent to which your preferred working style is more Structured or Flexible. These scales look at the extent to which you might tend to focus on these different, and at times competing, business activities. All four of PROPHET's Inclinations are on a spectrum. Because all of the elements are important in the workplace, people must balance the need to focus on both ends of each spectrum and adapt to the requirements of the business objective, phase of maturity, or business relationship. This can sometimes create tension. For example, being too People oriented could jeopardise your ability to focus enough on the tasks at hand. Likewise being too focused on Things means that you might risk missing the impact you have on the people around you, particularly on their feelings. Different roles and different business situations require different responses. The Inclinations are a helpful tool for considering how you come across to others and how you might be more adaptable in your behaviour and focus. In any role, it is important to be able to exhibit each of these Inclinations at the relevant time. These thinking and behavioural shifts can sometimes be difficult to sustain. The further to one extreme you are, the more difficult it might be to adopt the opposite way of working consistently. For example, a very Flexible person adept at change can only be Structured for so long, and vice versa.

Definitions of the Inclinations

Your Inclinations Chart

The indicators on the chart below show the strength and direction of your Inclinations. The further away from the centre, the stronger your Inclination. The text that follows provides some analysis of the strengths and the direction of your particular Inclinations.

How to interpret the chart: You are able to see how your preference compares to a 'typical' executive, taken from a large norm population of people in professional roles. The mid point on the chart shows the average score for a typical executive. The greyed area around the mid point illustrates the region which may be interpreted as a more balanced preference. A red box outside of the balanced area indicates a more exaggerated preference. Your personal preference is indicated by the red box – and the pink band around this shows where your score is likely to come out if you were to repeat the test, allowing for a margin of error that exists with all measurement. This band indicates 1 Standard error of measurement, indicating where you are likely to come out 67% of the time.

Your Inclinations Profile

The following text describes your Inclinations at work.

Firstly, you indicate that you have a strong preference for focusing on the Future. You are very likely to be interested in the future of where something is heading and why something is being done and will endeavour to understand the context or the bigger picture, concerning yourself with medium- and longer-term issues and opportunities, potentially at the expense of being in touch with the current status or progress at work. You are likely to enjoy reflecting on or planning how to achieve your future goal and are likely to resist doing something if you can't see the purpose of it. You are much more likely than the average executive to enjoy being focused on new possibilities.

Recommendation: Be careful when working with people who are more Present-focused that you have considered the practicalities of the here and now before expecting them to be on-board with future plans.

Following that, you indicate that you much prefer taking a Flexible over a more Structured approach at work. A strong preference for flexibility suggests that you are much more likely than the average executive to enjoy variety and dislike being tied to rigid processes. You are likely to be very comfortable in business situations that require you to adapt and switch between different activities. You are at ease with moving forwards, acting without needing to have everything organised and planned in detail beforehand. You are very likely to enjoy spotting opportunities to make things better.

Recommendation: Prioritise the processes that you need to build or follow in order to be more effective. Consider whether a more Structured approach could help you to be more effective or efficient, for example through diary management and choosing your timing carefully when you have the most energy to focus on being disciplined. Think carefully about your communication with others in order that you are perceived as being consistent and considered in your day-to-day work, particularly when dealing with those who prefer Structure.

Next, you show a strong preference for attending to People issues over Things. You prefer to look at matters involving relationships, morale, collaboration and the working culture, developing relationships in order that you deliver results. A preference for dealing with People issues is likely to mean you will think carefully about how others feel and will want morale to be high. You value relationships with colleagues, believing this to be vital for performance. Your responses indicate that during meetings or events you will typically make efforts to establish personal rapport, investing in work relationships and getting to know people. Also, when working with stakeholders such as clients or suppliers, rather than just sticking to the contract or task at hand, you will build close working relationships, getting to know the person not just their role or accountabilities.

Recommendation: You may, on occasions, need to be wary of putting too much energy into focusing on or engaging colleagues or your team.

Finally, you indicate that you prefer Leading, setting the direction, more than Managing at work, supporting the decisions or plans that others have set. Your inclination for Leading will mean you are more likely than the average person to step forward to take accountability and determine the direction for others, happily putting your name to a decision. You are likely to be most fulfilled at work when you know that you have opportunities to lead the way. You are likely to enjoy challenging targets and will push to get a result.

Recommendation: A lesser preference for Managing, may mean you could identify even more opportunities for you to take a back seat and let others lead and set direction. Do more to encourage others to express their views and opinions.

Introduction to Role Alignment

Different combinations of Inclinations map to form PROPHET's 16 business Roles, all of which are vital to business. Regardless of the size of the group, all of these Roles and responsibilities are likely to be needed at different phases of a business cycle, but in a small organisation or team it might be necessary for a few people to have a very wide remit. High-performing businesses are built on a balance of these 16 different Roles. Ideally, people need to perform a Role (or Roles) that reflect their preferences, so that they enjoy and are motivated by work, and therefore more likely to perform well and succeed.

PROPHET is based on a schema that represents a typical business cycle: a business needs to come up with new ideas, then turns them into workable plans, delivers on these plans and improves or fixes mistakes. Once this process has been completed effectively, it is time for the next important idea, and the process starts again. The 16 PROPHET Roles map onto these stages of business, indicating how individuals are likely to contribute to Creative, Design, Operational or Improvement phases within a business. Each new stage of development presents unique challenges for the organisation. PROPHET helps people understand when it is time to leverage their own preferences within the business cycle and when it is time to leverage those of others.

CREATE

Create is the stage at which projects or businesses are initiated. At this stage people conceive of ideas, take risks and require high stakeholder commitment. In investigating the feasibility of the concept or project, management must investigate available data to assess the attainability of an idea. This stage in PROPHET requires initiating and driving an idea (Entrepreneur), generating stakeholder commitment (Evangelist), collaborating and sharing ideas with the wider team (Marketer) and imaginatively creating new solutions and products (Inventor).

DESIGN

The Design phase comes once stakeholders and investors are committed to an idea. This involves organisational development, systematic and open communication to teams, evaluative and analytical decision-making, building partnerships and relationships with critical parties, and solidifying the design and development of a product or solution. This stage in PROPHET requires: the visionary understanding of what needs to be built (Architect), strategic relationship building to get the relevant stakeholders and partners on-board (Advisor), making sure the team is certain of what the new challenge constitutes and their roles in it (Team Builder), and detailed, seamless plans in order that people know what to do (Planner).

OPERATE

The Operate stage is when there is greater stability, demonstrated by the consistent delivery of quality. There are established controls in place for the growth and development of the business. This stage in PROPHET requires: accountability and drive around a goal (Operations Director), leadership of people and performance management around the goal (Organiser), maintaining a motivated and stable team that delivers (Coordinator), and disciplined, focused and detail-minded people who can be relied on to deliver (Operator).

IMPROVE

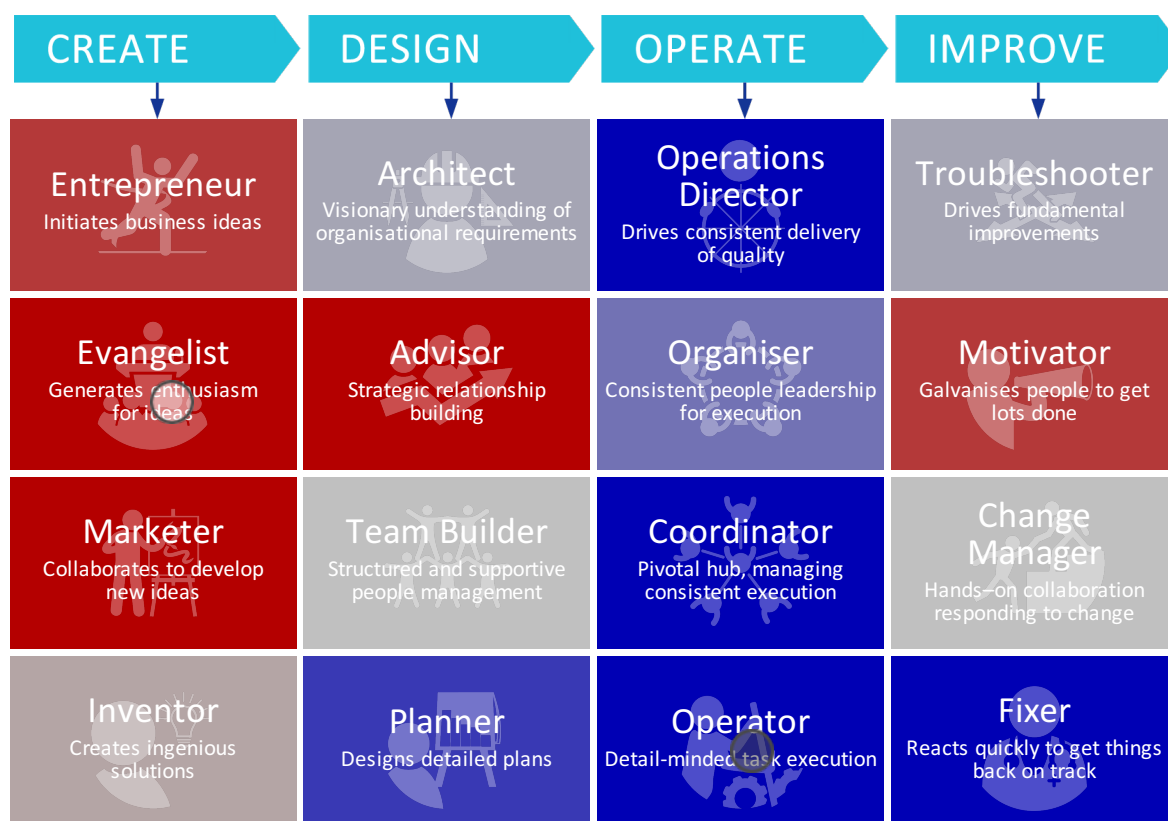

The Improve stage is vital to move the company or project beyond mere compliance, which can become a negative state. A business may have in place clear processes, and yet quality may diminish without the drive for continuous improvement. This stage is about extending the product or service and seeking out new markets. This stage in PROPHET requires: energy to drive through fundamental improvements (Troubleshooter), maintaining loyalty and hard work and a positive mindset, even in the face of great upheaval (Motivator), hands-on support to help bring about change collaboratively (Change Manager), and resolving snags and problems efficiently (Fixer).

Your Role Alignment Charts

This section looks at the 16 PROPHET Roles and identifies your strength of alignment to each. A strong alignment to a particular Role means that your Motivations and Decision-making Style are such that you would be likely to enjoy this kind of approach to business or to your job.

Many people have a strong alignment to a number of Roles—two, three or four is quite common. A person could make a significant contribution to any one of their strongly aligned Roles. Someone with a weak alignment to a Role or number of Roles is less likely to make a sustained or significant contribution in a business areas where any of these Roles is critical. Lack of alignment to a Role typically results in lower motivation for that sort of work, and therefore it becomes more difficult to maintain sustained effort and the need to do so is likely to result in fatigue and dissatisfaction. The chart below indicates your strength of alignment to the different Roles. The text that follows provides analysis of your particular Role Profile.

Your Role Alignment Heat Map – your relative preferences

Key

The Heat Map shows your personal relative preferences for each of the 16 PROPHET Roles.

Red represents your strongest preferences. Blue represents your lowest preferences and is also an indicator of who has the potential to complement you best.

The ○ dot represents the centre point of the region on the schema where you indicated your strongest Role preferences. The ● dot represents the centre point of the region on the schema where you indicated your lowest Role preferences. NB. These may not be in the same place as your single-most or least preferred Roles. When reading your report, look at the whole schema. The dots are most useful when looking for patterns within teams and for headline implications for potential relationship dynamics. I.e. Which colleagues have similar / or different and possibly complementary profiles?

The PROPHET schema is more than two dimensional. The first column is connected to the last column, and the top row is connected to the bottom row.

Your Role Alignment Scores – your preferences benchmarked

How to interpret the chart: You are able to see how your preference compares to a 'typical' executive, taken from a large norm population of people in professional roles. The mid point on the chart shows the average score for a typical executive. The greyed area around the mid point illustrates the region which may be interpreted as a more balanced preference. A red box outside of the balanced area indicates a more exaggerated preference. Your personal preference is indicated by the red box – and the pink band around this shows where your score is likely to come out if you were to repeat the test, allowing for a margin of error that exists with all measurement. This band indicates 1 Standard error of measurement, indicating where you are likely to come out 67% of the time.

Your Role Alignment Profile

You have very strong Role Alignment, the most significant Alignment being with the Evangelist and Marketer Roles, closely followed by Advisor.

The Evangelist is vital in generating stakeholder commitment. They are likely to be influential, inspiring, passionate and enthusiastic, typically full of ideas and are great at selling the vision to galvanise people. People with a preference for this Role are typically motivated by capturing hearts and minds and being in the limelight. They prefer to work in environments where they are at the front during the early stages of new ventures.

The Marketer collaborates and communicates enthusiastically and creatively. They are likely to be easy-going and good-natured, collaborate well, keen to communicate their ideas and keep others in the loop. People with a preference for this Role are typically motivated by being able to develop new concepts, by having enjoyable work and a good working environment, and by being valued. They prefer to work in environments where there is scope for imagination and creativity, and not excessive pressure.

The Evangelist and Marketer have a strong preference for the Create phase of the Business Cycle during which there is a need to build stakeholder support when ideas are being conceived and it is important to build the team's engagement and commitment to new concepts.

The Evangelist's strongest contribution to their business is the enthusiasm for and buy-in to the plans for the organisation. The Marketer; the ability to help the wider team see the benefits of new possibilities.

Comparatively, you indicated that your lowest Role preference is for the Operator and Operations Director Roles: The Operator focuses on task execution, tending to be detail-minded and likely to be relied on to deliver consistently and to high standards. Their strongest contribution to their business is unflappable quality and reliability. The Operations Director readily takes accountability and shows drive around goals. Their strongest contribution is the passion and drive to deliver results to achieve or exceed targets.

Success for people in certain Roles can often mean working closely with others that have complementary profiles – where their strengths match the areas where they are less strong or less motivated to devote time and energy. Consider the extent to which you have close working associations with people with these profiles and the extent to which you might benefit from strengthening such associations.

For more information and advice on all 16 PROPHET Roles, please see the Appendix.

Some questions to consider:

- To what extent does your current job mirror your personal preferences for different types of business Roles in the PROPHET schema?
- Given your natural preferences, what are the implications for you in your current job?
- What do others recognise you for in the workplace? To what extent does this match your Profile?
- To what extent are you required to fulfil the types of activities that are not your strong preferences?
- Do you feel you sometimes lack motivation for your job? If so, why do you think this is?
- With whom might you need to work closely in order to complement your own Profile? When might it be appropriate to team-up with them?

Appendix

The Appendix contains further descriptions of all 16 PROPHET Roles.

Create Roles

Entrepreneur: Things, Leading, Future, Flexible

The Entrepreneur drives and initiates business ideas, showing a strong preference for the Create phase of the business cycle, during which projects or businesses are instigated. Entrepreneurs are driven, courageous, decisive and assertive. Their strongest contribution to the businesses is a clear direction and strategy. Motivated by a mixture of achievement and personal success, they prefer new business opportunities, fast pace and calculated risk. They are competitive and relish new challenges.

They might say: 'We need to change again. This is the way forward.'

Let them: Talk about the future, new ideas and what needs to change. Indulge them in big picture discussions, and new ideas may come.

Manage them by: Having a plan and a list of actions and milestones, and check they are done without being too bureaucratic. Let them lead on difficult conversations or negotiations.

Support them by: Documenting their ideas, revisiting them, turning them into lists and plans and (quickly) monitoring them with these, showing successes and half-baked ideas.

Evangelist: People, Leading, Future, Flexible

The Evangelist is vital in generating stakeholder commitment. Evangelists show a preference for the Create stage of the business cycle, building stakeholder support when ideas are being conceived and a business might need to take risks. They are influential, inspiring, passionate and enthusiastic. Their strongest contribution to their businesses is the enthusiasm for and buy-in to the plans for the future. They are motivated by capturing hearts and minds and being in the limelight. They relish being at the front during the early stages of new ventures. They are typically full of ideas and are great at selling the vision to galvanise people.

They might say: 'I've had a vision, and it will be fantastic when we get there.'

Let them: Dream of where they could get to. It's where they get their energy and passion.

Manage them by: Writing down the vision and noting down the milestones. What are going to be the first few steps? Manage them on the steps. Get them out selling the vision.

Support them by: Help them make sure that they don't over-promote and that they back up ideas with the detailed plan.

Marketer: People, Managing, Future, Flexible

The Marketer collaborates enthusiastically during the creation of new ideas, helping the wider team to see the positive. Marketers show a preference for working at the Create stage of the business cycle, during which team engagement and commitment is needed to be high. They are creative, easy-going and good-natured. Their strongest contribution to their businesses is unique, creative inspiration. They are motivated by being able to develop new concepts, being valued and by enjoying their work and working environment. Their preferred working environment is one where there is scope for imagination and creativity and not excessive pressure. They collaborate well, are keen to communicate their ideas and like to keep others in the loop.

They might say: 'I've had some ideas on how I can support this concept.'

Let them: Share their ideas and how they can support the team to fulfil its plans. They are likely to have listened to and thought about many options.

Manage them by: Creating a very detailed plan of actions and priorities and regularly reviewing progress.

Support them by: Helping them overcome obstacles and barriers, particularly around difficult people.

Inventor: Things, Managing, Future, Flexible

The Inventor comes up with the ingenious creation of new solutions and products. Inventors show a preference for the Create stage of the business cycle, during which new concepts or projects are initiated. Inventors tend to be imaginative and independent. Their strongest contribution to their businesses is innovative new products and solutions. They are motivated by being able to focus on new ideas and also by the quality of their inventions. They typically prefer to work alone or in small teams of high calibre individuals. They need to be in environments where there are plenty of opportunities to be inventive. They like to multi-task and very much value their independence.

They might say: 'Look at this. It's genius.'

Let them: Have the freedom and time to experiment and concoct ideas. Some of them could be really valuable.

Manage them by: Making sure they are integrated into the team and business processes.

Support them by: Giving them new problems to solve. Help bridge relationship gaps with team members so that others can contribute to their work.

Design Roles

Architect: Things, Leading, Future, Structured

The Architect has the visionary understanding of what needs to be built and shows a preference for the Design phase of the business cycle. Once stakeholders and investors are committed to an idea, the Architect plays an important role in the organisational development of it. Architects are forward-looking, logical, visionary, ambitious and structured. Their strongest contribution to the business is a clear understanding of how to build for the future. They enjoy having new problems to solve that utilise their expertise, and are motivated by the quality and elegance of the solutions they produce. They prefer to work in environments that offer new, complex structural challenges, with space to think and low reliance on others. They are highly independent and very particular about the end solution. They are passionate about quality.

They might say: 'No. This is the only way forward that will be successful.'

Let them: Have a quiet environment with no disturbances where they can think through major issues.

Manage them by: Checking in with them at stages in the Design process to provide input and make sure that people are brought along with them.

Support them by: Aligning teams around their plans and providing environments in which they can present their work to keep people engaged.

Advisor: People, Leading, Future, Structured

The Advisor plays a vital role in strategic relationship building to get the relevant stakeholders and partners on board. Advisors show a preference for the Design stage of the business cycle, during which structured and open communication to teams is important. They are self-confident, persuasive, charming and perceptive. Their contribution to their business is developing the strong relationships necessary for success. They are motivated by working out how to build the meaningful relationships to make change happen and orchestrating people to create the future. They are typically very focused and tenacious, and are able to present concepts in a way that has rational and emotional appeal.

They might say: 'There are very specific benefits for everyone if we achieve this outcome.'

Let them: Lead everyone to implement concepts and plans.

Manage them by: Giving them a very complex, organisational influencing goal with a significant tangible outcome.

Support them by: Helping them overcome 'fixable' issues that feel like minutiae but could derail their plans.

Team Builder: People, Managing, Future, Structured

The Team Builder considers how others can be supported to do their jobs well, helping team members understand what a new challenge entails and what individuals' roles are within it. Team Builders show a preference for the Design stage of the business cycle, during which systematic and open communication with the team is important. They are encouraging, approachable and can be emotionally intelligent. Their strongest contribution to the business is helping people work together to maximum effect. Motivated by the success of the team and their personal reputation, they prefer to work in large teams in complex organisations and in new ventures or change programmes. They are interested in others, enjoy networking and focus on getting the best out of people.

They might say: 'We just need to make sure that everyone knows what they are doing and we will work well together.'

Let them: Have airtime in meetings. They may well have read the politics and have a sense of what everyone needs to do to keep together.

Manage them by: Creating a sense of urgency by using the plans as a checklist of deadlines to hit.

Support them by: Helping others in the team understand the very specific value they bring that keeps things moving behind the scenes.

Planner: Things, Managing, Future, Structured

The Planner designs the detailed, seamless plans so that people know what to do. Planners show a preference for the Design stage of the business cycle, solidifying the design and development of a product or solution. They are organised, meticulous, structured and have an eye for detail. Their strongest contribution to the business is joined-up plans of action. They are motivated by the ability to influence large programmes. They are also passionate about creating order. They prefer to work in complex programmes where there is good leadership and clear requirements. Planners excel at creating structure, gather information from many sources, typically work independently and tend to communicate through documentation.

They might say: 'It would be very useful if we turned this into a plan that can be monitored.'

Let them: Have recognised time in meetings to detail what needs to get done.

Manage them by: Discussing their relationships and the extent to which people are committed to their plans, and by helping them to have the difficult people discussions in a positive way.

Support them by: Promoting the value of this Role to the team, since without it, plans will derail; help them integrate into the team to leverage their value.

Operate Roles

Operations Director: Things, Leading, Present, Structured

The Operations Director readily takes accountability and shows drive around a goal. Operations Directors show a preference for the Operate stage of the business cycle, when there is greater stability in a business and the need for consistent delivery of quality. Operations Directors are disciplined, focused, energetic and no-nonsense. Their strongest contribution to the business is the drive to deliver immediate results. Motivated by achieving outcomes and delivering major undertakings efficiently and effectively, they prefer working environments where there is control, discipline, order and predictability. They are output- focused and can be relentless in pursuing their goals. They enjoy directing task-focused teams.

They might say: 'Ok. You know the drill. No mistakes.'

Let them: Lead when everyone is clear on the plan, and ask them to set the order of the activities.

Manage them by: Checking that what they are doing today is clearly linked to the plans for the future. Involve them in the planning process to make sure that building the future doesn't undermine the present.

Support them by: Helping them focus on their role in the culture of the team and the people issues that they may have missed while directing others.

Organiser: People, Leading, Present, Structured

The Organiser provides consistent leadership of people to execute the plan. Organisers show a preference for the Operate stage of the business cycle, when management tends to be focused on growth and assurance of customer satisfaction. They are authoritative, confident, articulate, firm, no-nonsense and, of course, organised. Their strongest contribution to the business is helping the organisation work with maximum efficiency. They are motivated by being at the front of a well-run organisation and also by their status within their organisation. They prefer lead roles in large teams. Their approach may have led to the development of highly structured people skills. They are likely to want to manage performance actively and introduce order and discipline into the working environment.

They might say: 'Right everyone. You know your roles. Let's have a good day.'

Let them: Have project lead roles, since they will galvanise people to deliver the remit.

Manage them by: Checking in with them about whether their enthusiasm to lead is taking people in the right direction, or whether they have potentially missed that the task or context is changing.

Support them by: Watching out for people who do not respond to their motivational tactics, and preventing these people's views from becoming a blind spot of negativity.

Coordinator: People, Managing, Present, Structured

The Coordinator plays a pivotal hub role in a business, managing and supporting others to execute a plan, contributing to a productive, happy, motivated and stable team that delivers. Coordinators tend to prefer the Operate stage of the business cycle during which stability and consistent delivery are crucial. Coordinators are helpful, supportive, trustworthy, calm, consistent and reliable. Their strongest contribution to the business is a successful working environment. Motivated by having a strong sense of team and an efficient operation, they value stability and a high degree of continuity in role, bringing people together by being at the core of business activities. They ensure what should happen does happen and work to improve the team's culture to bring about heightened performance.

They might say: 'Is there anything anyone needs from me?'

Let them: Have access to all they need to get things done, and the right to talk to people about how they are getting on and what help they need.

Manage them by: Explaining the context in which they work and the key business deliverables and imperatives that people need to work with for others to be successful.

Support them by: Ensuring that others who are perhaps more forceful understand the hub support that this Role brings.

Operator: Things, Managing, Present, Structured

The Operator focuses on task execution, is detail-minded, and can be relied on to deliver consistently and to high standards. Operators show a preference for the Operate stage of the business cycle, during which the delivery of consistent quality is important. Operators are thorough, productive, responsible, systematic and methodical. Their strongest contribution to the business is likely to be unwavering quality and reliability. They are motivated by the desire to do a job as well as possible. They also value job security. They prefer to work in environments where there is clear direction from above and where they have all the tools needed to do the job readily available. They tend to be highly focused, disciplined, can be relied on to deliver, and likely to be good with detail.

They might say: 'I'm working on it at the moment.'

Let them: Focus on the priorities and tasks in front of them and don't distract them.

Manage them by: Discussing their key stakeholders and what they need to deliver to whom and by when.

Support them by: Ensuring that there is a forum to celebrate the achievements and successes of work that they have achieved.

Improve Roles

Troubleshooter: Things, Leading, Present, Flexible

The Troubleshooter pushes through fundamental improvements in business activities. Troubleshooters show a preference for the Improve stage of the business cycle, vital in moving a company beyond compliance to continuous improvement. They are highly active, sleeves-rolled-up leaders. Typically, unstructured in the way they work, their strongest contribution to the business is the energy to drive through fundamental improvements in current operations. They are motivated by the desire to change things, make a personal difference and do things differently. They prefer to work in dynamic situations where there is a need for urgency and no rigid formula to follow. They identify issues quickly, take ownership and deliver pragmatic solutions. They undertake tasks without getting side tracked and don't let anyone stand in their way.

They might say: 'Out of the way. This needs sorting. There's so much to do, so just do what I say.'

Let them: Go after problems or crises. They will drive through to a result.

Manage them by: Making sure they are forced by structure or meetings to plan with others and ask them for the plan. Ask them to be accountable for the quality of their relationships and not just their results.

Support them by: Making sure everyone knows that they are there to get stuff done and not to take what they say personally.

Motivator: People, Leading, Present, Flexible

The Motivator energises people to have a "let's do it" mind-set and get a lot done. Motivators show a preference for the Improve stage of the business cycle, during which the business may require change and improvement. They are likely to be charismatic, sociable, likeable and full of get-up-and-go. Their strongest contribution to a business is the enthusiasm for the achievement of common goals. Motivated by making things happen, winning loyalty and earning respect, they prefer to work in unstructured situations where there is a high degree of variety and a loyal and hardworking team. They are energetic, informal and personable, and have an enthusiastic style that is likely to galvanise teams into action.

They might say: 'Let's get cracking; we can nail this.'

Let them: Lead short-term initiatives that need a quick result through a team.

Manage them by: Making sure they are working to the agreed plan and not to new or old ideas.

Support them by: Giving them a clear framework to operate in and making sure that they are working against a clear plan.

Change Manager: People, Managing, Present, Flexible

The Change Manager provides hands on support, responding positively and quickly to changing requirements, acting in a collaborative way. Change Managers tend to prefer the Improve stage of the business cycle, during which the product, service or way of working is being extended or developed. They tend to be adaptable, people-oriented, collaborative, hands-on, friendly, loyal and committed. Their strongest contribution to the business is supporting a wide range of activities. Motivated by helping people to deliver tasks, they prefer roles requiring interaction and with a good team atmosphere. They are excellent team players and work collaboratively to make things happen.

They might say: 'Everything is ok. It is not that chaotic. So much going on is good really.'

Let them: Get involved in situations that require responsiveness, flexibility and high levels of collaboration and teamwork.

Manage them by: Giving them a clear set of deliverables against the plan and checking in each day or week for their successes.

Support them by: Limiting the amount of difficult situations or forceful conversations that they need to have in their role.

Fixer: Things, Managing, Present, Flexible

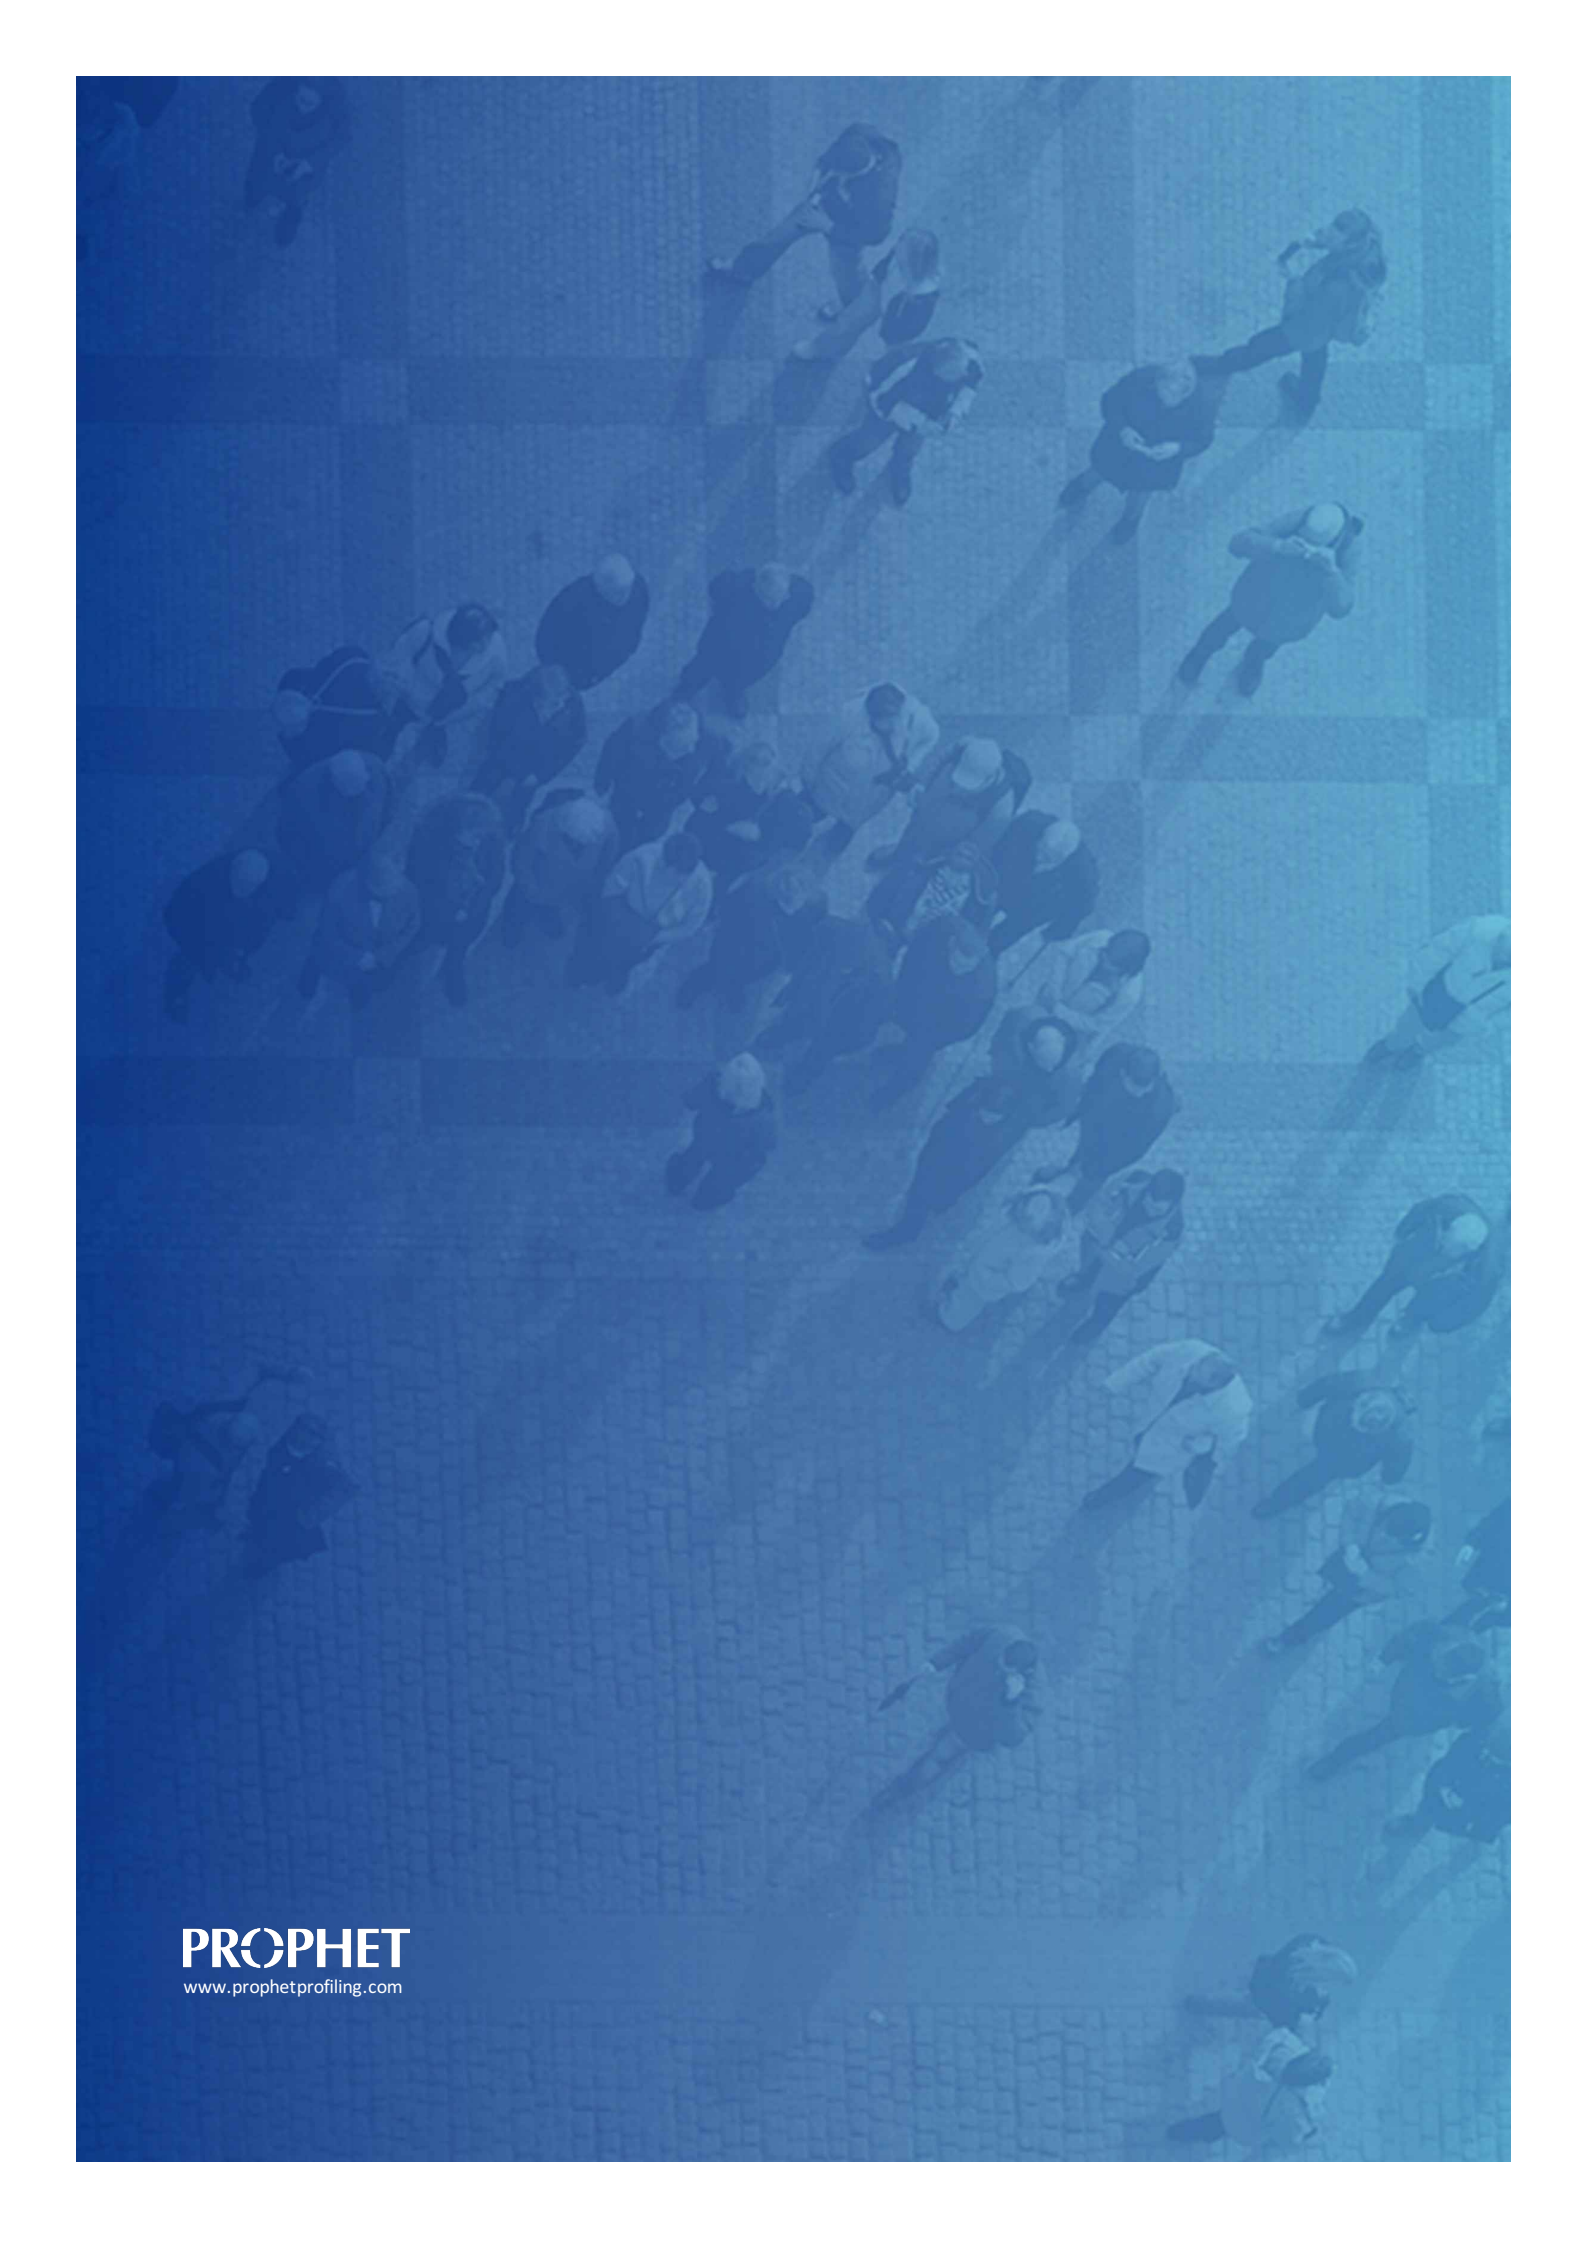

The Fixer reacts quickly, resolving snags and problems to get business activities back on track. Fixers show a preference for working at the Improve stage of the business cycle, during which there is a push for quality and overcoming issues. They are pragmatic, multi-tasking and problem solving. Their strongest contribution to the business is speed of response to resolve issues and seize opportunities. Motivated by being involved in the thick of activities, making things happen and having variety and interest in the things they are involved in, they prefer to work in complex environments where there is an urgent need for change. They relish a challenge and are happiest when busy. They devote themselves to tasks and love to experiment.

They might say: 'I'm very busy at the moment. Just getting it sorted and we can talk later?'

Let them: Work on independent tasks that need 'sweeping up'.

Manage them by: Monitoring with them how they are working with the team and to the team's plan.

Support them by: Making sure they are connected to team meetings and the plans that need implementing, and to the problem areas they need to solve.

An aerial, high-angle photograph of a large crowd of people walking on a checkered floor. The image is monochromatic, with a blue tint. The people are seen from above, their shadows cast long and dark. The floor is composed of large, light-colored square tiles. The crowd is dense in the center and more sparse towards the edges. The overall mood is one of movement and gathering.
